Thermodynamics is the branch of physics that has to do with heat and temperature and their relation to energy and work. The behavior of these quantities is governed by the four laws of thermodynamics, irrespective of the composition or specific properties of the material or system in question.

In thermodynamics, a critical point (or critical state) is the end point of a phase equilibrium curve. The most prominent example is the liquid-vapor critical point, the end point of the pressure-temperature curve that designates conditions under which a liquid and its vapor can coexist.

La termodinámica es una materia excitante y fascinante que trata sobre la energía, la cual es esencial para la conservación de la vida mientras que la termodinámica ha sido por mucho tiempo una parte fundamental de los programas de estudio de ingeniería en todo el mundo.
