Distillation is the process of separating the components or substances from a liquid mixture by using selective boiling and condensation. Distillation may result in essentially complete separation (nearly pure components), or it may be a partial separation that increases the concentration of selected components in the mixture.

A covalent bond, also called a molecular bond, is a chemical bond that involves the sharing of electron pairs between atoms. These electron pairs are known as shared pairs or bonding pairs, and the stable balance of attractive and repulsive forces between atoms, when they share electrons, is known as covalent bonding.

Covalent bond - Wikipedia

This chapter considers adhesives used by the conservator and some of those encountered by the conservator during treatment. The advantages and disadvantages of a particular adhesive, and its preparation for use in conservation, are also discussed.
